

Driven By Innovations

Dear Valued Customer,

Thank you for purchasing our innovative & patent pending generator running cover and we really appreciate your business.

Compared to the current generator running covers on the market, our cover has below unique features:

- No Set-up or Assembly required for each operation.
- Same cover for both storage and running in the same location.
- Aluminum hard top cover with steel tube frame support.
- Any side can be open and locked at any height.

Since our cover can be used for generators in storage and running, you don't have to store your generator in the garage when not used. The most efficient way is to find a permanent location in your backyard and store there and when you need to run the generator, just open the front and back side, as well as the panel side to start the generator and hook up the wiring. This will not only save your garage space, but also significantly reduce your preparation time for each operation.

The GC-2021 model is designed for home portable gas generators upto 12KW as the home backup power application. The IC-2021 model is design for inverter generator upto 4KW for camping, RV and other outdoor activities. Please read the operation manual on the right page and follow the generator manufacturer's safety guide. You can also visit our website www.genshed.com for more information about the function, feature and assembly of all our innovative products. If you have any questions or problem about our generator running cover, please contact us at customerservice@genshed.com.

If you like our product, please leave an online review from the store you purchase. If you see any improvement opportunity after using the product, please feel free to contact us so we can continuously improve and perfect the product.

Please enjoy the convenience brought by our innovative generator running cover and stay safe and warm when using your generators.

With Our Best Regards!

Connecting to Generator

GC-2021

Couple top cover to the Generator's top frame by Velcros hooks & loops

Cut and paste the two provided Velcro hooks onto the inner surface of top cover with the same distance as the two horizontal frames

Cut and paste the two provided Velcro loops onto the two horizontal frames

IC-2021

Cut and past Velcro hook to each top corner

Cut and wrap Velcro loop over the cover's frame and couple to the Velcro hook at each corner

Covering The Generator In Storage

GC-2021

Folding Handle
Top Velcro

Side Velcro

GC cover sits on generator's top frame. If Generator is shorter than GC cover in height, insert a layer of bricks under generator

IC-2021

IC Cover sits on ground

Covering The Generator In Running (GC & IC)

Back cover fully flipped over the top and locked by top Velcro

Front cover rolled partially to any height as needed and locked by side Velcro

Panel cover can be rolled or closed as needed and locked by side Velcro

Refilling The Gas

GC-2021

Lift the top cover by the panel side and turn 90 degree to let top cover side-sit on the ground, then fill the gas on top

Decouple the Velcro and lift the cover to refill the gas

IC-2021
